

Dr Christian Ottolini trained as an Embryologist at the renowned PIVET Medical Centre in Perth, Australia. After moving to London in 2009 he began a PhD programme whilst working at The Bridge Centre specialising in preimplantation genetics. He went on to use his considerable experience to set up a state-of-the-art IVF facility at The Ewell on Harley Street, London, where he is currently the Laboratory Director.

Christian's research continues to provide new insight into the origin of gross genetic errors in humans, which are the leading cause of pregnancy loss, learning disabilities, infertility and IVF failure.

Christian is also an innovator in the clinical realm and he passionately works to translate his research into tangible benefits for IVF patients.
