

BIO

Inger Nijhof is a Hematologist at the VU University Medical Center in Amsterdam, The Netherlands. She treats patients with a variety of hematological malignancies but has a special interest in the treatment of patients with multiple myeloma. Dr Nijhof is involved in translational and clinical research, aimed at finding new targets for therapy, with a focus on immune therapy. Part of Dr Nijhof time is dedicated to teaching medical students, residents, and colleagues about hematological diseases with an emphasis on multiple myeloma, and she frequently gives presentations at regional, national, and international conferences. Last year she was participating in the Clinical Research Training in Hematology of EHA.
