

**Dr. Francesco Fiorentino** is a molecular biologist. He is founder and CEO of GENOMA, a private molecular genetics laboratory which is now one of the largest specialized provider of genetics services.

Dr. Fiorentino is actively involved in the field of reproductive genetics since almost two decades, specifically in Preimplantation Genetic Screening (PGS) and diagnosis (PGD), and the study of human oocytes and embryos. His laboratory has a strong translational emphasis and is actively involved in the development of new techniques for improving the success rates of in vitro fertilization (IVF) treatment.

Dr. Fiorentino is author of over 40 peer-review papers and book chapters.
