

Dr. Ben Davies received his PhD in molecular biology from the University of Edinburgh where he first encountered genetic modification as a research tool at the Centre for Genome Research. After a postdoc at the Charité Hospital Berlin, he moved into commercial biotech working as Scientific Director for a start-up transgenic service company based at the University Hospital Hamburg-Eppendorf which was then merged with the French Biotech company, Genoway. After 4 years in this role, he moved to Oxford where he runs the Genome Engineering Core Research Group at the Wellcome Trust Centre for Human Genetics at the University of Oxford, a position he has held for the last 10 years.
