

Dr. Camran Nezhat has been called the father of modern-day operative laparoscopy. He invented and pioneered the technique of video-assisted endoscopy and performed the most advanced surgical procedures by this technique, which revolutionized surgery. By doing so, he opened the vistas for endoscopic surgeons all over the world to help their patients. Early on he declared that wherever in the body a cavity exists or can be created minimally invasive surgery is possible and probably preferable, the limiting factor is skill and experience of the surgeon and availability of proper instrumentations.
