

Professor Evelyn Telfer holds a personal chair in Reproductive Biology at the University of Edinburgh where she heads a research group in Ovarian Development within the Institute of Cell Biology and Centre for Integrative Physiology.

Her group has a particular interest in developing in vitro models to support oocyte development from immature stages in domestic species and human. Her group is now using these models to study the potential of female germ line stem cells isolated from adult ovaries in a range of species. She has published widely in this area and is a regular invited speaker at International meetings.
