

Prof HM Picton Short Biography

I hold a personal chair in Reproduction and Early Development within the Discovery and Translational Science Department, in the School of Medicine at the University of Leeds, UK. I am the programme director for the Leeds MSc in Clinical Embryology and ART and am Scientific Director for Leeds Fertility, within the Leeds Teaching Hospitals NHS Trust. My research programme is focused on investigation of the cellular and molecular biology of oogenesis, folliculogenesis and embryogenesis in humans and large animals and the used of this improved scientific insight to better understand the aetiology of female infertility and to develop new methods to treat infertility and to preserve female fertility.
